Data Everywhere

The Market of Stolen Personal Information

- Credit card information (name, billing address, card-number, CVV2 code, and expiration date) = \$1.50 – \$3.00 per file.
- Social security numbers = \$1 – \$6 per number, depending on availability of corresponding date of birth and/or mother's maiden name.
- Online banking log-in details = \$50 – \$1,000.

Health records are the new credit cards

Broker fined £175,000 by information watchdog after cyber criminals raid customer records

25 February 2015 | By Newsdesk

Top 50 broker Staysure slammed by Information Commissioner's Office for 'unbelievable' security failures

The Information Commissioner's Office (ICO) has hit over-50s personal lines broker Staysure with a £175,000 fine after its customer records were hacked and used for fraud.

More than 5,000 customers had their credit cards used by fraudsters.

Hackers potentially had access to more than 100,000 live credit card details and customer medical records. The ICO was especially critical of the way credit card security numbers were exposed, despite industry rules that they should not be kept at all.

The ICO investigation found that Staysure had breached the Data Protection Act by failing to keep the personal information secure.

The company had no policy or procedures in place to review and update IT security systems, and had twice failed to update database software that could have prevented the incident.

How Do Data Breaches Occur?

- Employee loses **an unencrypted portable device** (smartphones, laptop, thumb drive, backup tape)
- Property crimes (computers prime targets)
- Inside job (**employee steals information**)
- Stray faxes, emails
- **Phishing** scams and increasingly, **Social Engineering**
- **Malware** / virus attacks (especially when working remotely on an unsecured network)
- Failure to purge/scrub computing devices scheduled for destruction
